

TEN-YEAR VISION · 2037

Format 3 · Milestone hybrid

By 2037, the Coldwater Basin sustains clean and reliable water, fire-resilient forests and rangelands, working lands that stay in production, and wildlife that can move freely, stewarded by a district that holds itself to visible milestones along the way.

PILLAR 1 OF 5

1 Water & Watershed Health

We are working toward a basin where water is healthy, connected, and shared, and we hold ourselves to concrete checkpoints so the community can see progress long before 2037.

STRATEGIES

- Restore priority riparian and stream reaches, worst-first.
- Broker voluntary water-sharing and in-stream flow agreements.
- Build a shared, basin-wide monitoring and data picture.

MILESTONE TARGETS

3-year targets · 2030

- 15 stream miles restored
- 2 in-stream flow agreements signed
- 15 monitoring sites active

5-year targets · 2032

- 40 stream miles restored
- 5,000 AF kept in-stream at peak
- 3 sub-watersheds reach “good”

10-year direction · 2037

A reconnected priority stream network and basin-wide water-sharing that holds through drought.
